

“Conquer Your Mountains of Data”

CorData FC4/128 SERIES Fibre Channel Blade Switch

High performance storage networking switch featuring up to 128 ports via affordable 16 port 4Gb and 4 port 10Gb ISL blades. High performance non-blocking backplane provides maximum port performance with all 128 ports utilized, and eliminates interconnect port consumption.

Presenting the CorData FC4/128 SERIES data storage switches...
the ideal solution for scalable and high-performance storage networking.

Featuring 4/2/1Gb industry-standard fibre channel connections supporting the current and future industry standards. Our advanced blade switch architecture make it possible to add as many as eight affordable sixteen-port 'blades' to expand to 128 usable ports. Switches feature advanced GUI management tool (included), unequaled mixed-vendor compatibility modes including Brocade emulation, and outstanding reliability, scalability, and storage performance.

FC4/128 SERIES

Edge-switch applications

CorData FC4/128 SERIES fibre channel switches are the ideal solution for rapidly growing or changing departmental SAN applications, since the switch is highly expandable. Available in 16 to 128 port configurations, switch blades may be combined or redeployed on the fly as port counts and SAN locations evolve over time.

Highly redundant fibre channel infrastructure

CorData FC4/128 SERIES fibre channel switches may be implemented as a highly available switch featuring redundant N+1 power supplies, switch pairs, or a fibre mesh consisting of core and edge switch fabric configurations. The CorData FC4/128 includes powerful auto configuration software (standard), which automatically senses and reconfigures multiple switches for efficient operation.

Highly scalable and affordable core switch architecture

Low cost FC4/128 SERIES switch pairs may be deployed for high performance and economical core-switch replacement solutions. Featuring low cost-per-port pricing, FC4/128 switch components may be configured into easily managed, affordable, no-single-point-of-failure SAN solutions offering core switch capabilities at a fraction of the cost.

**Low cost storage networking...
New ways to solve your data
storage challenges.**

FC4/128 SERIES

Breakthrough Technology.

CorData FC4/128 SERIES switches feature a non-blocking backplane, so you can easily expand ports via affordable 16-port 'blades'; up to 128 usable ports per switch. Inter-blade communications is via the backplane, so no ports are consumed as interconnects. 10Gb 4-port modules are also provided for high-speed ISL connections. The included GUI manager provides virtual switch management, zoning, and reconfiguration tools making deployments and reconfigurations a snap. N+1 redundant power supplies insure your switch operates reliably, and power supply replacement is easy and non-disruptive.

Upgrade to 4Gb SAN hardware at a fraction of the cost other vendors are charging.

CorData FC4/128 SERIES switches are designed to be easily integrated into existing 1, 2, and 4Gb environments. Compatibility mode makes integration into Brocade switch fabrics particularly easy. Need 4Gb throughput to your storage devices? Migrate older, 1 and 2Gb devices to the edge of your SAN and deploy FC4/128 switches as the centerpiece of your high performance backbone or core switch strategy.

Advanced storage technology at a great price.

A great price does not mean inferior technology. CorData FC4/128 switch products are part of a full line of fibre channel switches and host bus adapters featuring the same core chipset, firmware, and management software. Choose the best products available from a world-class manufacturer featuring world-class technology and world-wide support.

4Gb Fibre Channel Blade Switches
